Tylosin 10 Premix

Ingredient(s):
- tylosin phosphate

Liver abscesses, reduction of incidence
- SPECIES: Beef Cattle
- ROA: In the feed
- DOSE: Steers and heifers fed in confinement for slaughter: 0.5 kg (11 g tylosin)/1,000 kg complete diet. Feed continuously as sole ration.
- WT NOTES: Do not use in lactating cattle.

Porcine proliferative enteritis (ileitis), prevention/control
- SPECIES: Swine
- ROA: In the feed
- DOSE: 5 kg (110 g tylosin activity)/1,000 kg complete feed. Feed as sole ration for 21d, starting before an expected outbreak of disease.
- WITHDRAWAL TIME: Meat: 0d
- WT NOTES: No preslaughter withdrawal period is required when swine are treated with this drug at a level of 110 g tylosin per 1,000 kg of complete feed, except when used concurrently with tylosin in the drinking water.
  Swine treated concurrently with this drug in complete feed and with tylosin tartrate in drinking water must not be slaughtered for use in food for at least 48 hours after the last treatment with tylosin in drinking water.

Swine dysentery, control/prevention
- SPECIES: Swine
- ROA: In the feed
- DOSE: 2 kg (44 g tylosin)/1,000 kg complete feed until market weight. Feed as sole ration.
- WITHDRAWAL TIME: Meat: 0d
- WT NOTES: No preslaughter withdrawal period is required when swine are treated with this drug at a level of 110 g tylosin per 1,000 kg of complete feed, except when used concurrently with tylosin in the drinking water.
  Swine treated concurrently with this drug in complete feed and with tylosin tartrate in drinking water must not be slaughtered for use in food for at least 48 hours after the last treatment with tylosin in drinking water.
Swine dysentery, treatment
